Subject: Fwd: Request for lesser prairie-chicken maximum entropy geospatial data and documentation

Date: Friday, September 11, 2015 3:12:45 PM

Importance: High

Jonathan,

See below for information related to the under development paper on LEPC maximum entropy model, with the lead on the work being Catherine Jarnevich. Please feel free to download the data and add these information sources to our ongoing data table efforts. Also see the WAFWA provided link to the final MaxEnt output.

I'm still working through attempts to access other data we discussed on the last call.

Let me know if you have any questions or problems accessing the information. -Chris

Subject: Re: Request for lesser prairie-chicken maximum entropy geospatial data and documentation

To: "O'Meilia, Chris" < chris omeilia@fws.gov>

Hi Chris,

Sorry for taking so long in getting back to you. I was unexpectedly out a fair amount with sick kids, and tracking all this down has taken more time than expected.

We were given transmission line data from Platts, and it came with a nondisclosure agreement. I believe it was provided to the working group by WGA, but I was not involved in any of that and do not have details.

Mike Houts provided the CRP layer to me. I'm not sure if there is an issue with sharing it since it is at a courser resolution than the original, and am checking on that. I also vaguely remember there being something related to the well data, but that may not be true. I am contacting Mike to double check on both of these.

The other layers I used in the model I can provide without a problem. I have placed them in a zip file on an FTP site. Please let me know if you have any questions about them.

 $\underline{ftp://ftpext.usgs.gov/pub/cr/co/fort.collins/Jarnevich/}$

The file is the ModelPredictors.zip.

Layers used included:

Variable	Creation step	Source	Name
Distance to FAA structure	Euclidean distance (meters) to FAA obstructions taller than 50 feet using ArcGIS Spatial Analyst tools.	Federal Aviation Administration, January 2011	SGP_vert_GTE50_120912_eucdist
Distance to highway	Euclidean distance (meters) using ArcGIS Spatial Analyst tools to highways.	ESRI ArcGIS Data and Maps, version 10, "mroads" layer from the North America Streetmap dataset including interstates, freeways, state and county highways	highways_eucdist_2012extent
Distance to all roads	Euclidean distance (meters) using ArcGIS Spatial Analyst tools to roadways.	ESRI ArcGIS Data and Maps, version 10, North America Streetmap database subset to named roads (field "DISP_NAME"; except for Kansas which is from 2010 Kansas Department of Transportation data)	streets_eucdist_2012extent

Case 7:23-cv-00047-DC Document 61-2 Filed 05/06/24 Page 2 of 6

Distance to transmission lines	Euclidean distance (meters) using ArcGIS Spatial Analyst tools to any transmission lines.	Platts "North America Electric Transmission Lines GIS Layer", obtained April 2011	-
Well density	Point statistics in ArcGIS Spatial Analyst neighborhood functions, summing the number of points in a circle with a 1600m radius	Well data compiled from each state government in 2011, removing those with indication no longer active.	-
Average EVI	Average of average annual Enhanced Vegetation Index (EVI) from 2000 to 2009	MODerate resolution Imaging Spectroradiometer (MODIS) Vegetation Indices: http://ladsweb.nascom.nasa.gov/data/search.html	EVI_annualMeanValue_2010
Topographic Ruggedness Index (TRI)	Topographic Ruggedness Index calculated following Riley et al. (1999); resampled to 240m	National Elevation Dataset 1 arc-second Digital Elevation Model (http://ned.usgs.gov/index.html)	tri2012
State	Categorical value for each of the five states	National Atlas of the United States, State Boundaries of the United States: National Atlas of the United States, Reston, VA. (http://nationalmap.gov/)	FiveStates_Proj
Percent 'known used' or 'suspected used' (Appendix A)	Focal Statistics (suitable_2010, Sum) / Focal Statistics (constant, Sum) * 100, Calculated for a 5000m radius	Regional land cover map derived from the Southwest Regional Gap Land Cover Dataset in New Mexico, the National Land Cover Dataset for Colorado, Kansas and Oklahoma, and Ecological Mapping Systems of Texas.	LC_5000_210
Percent conservation reserve program (CRP) land	Focal Statistics (suit_*, Sum) / Focal Statistics (constant, Sum) * 100, Calculated for a 5000m radius	Conservation Reserve Program information summarized from 2012	-
Landscape condition	Comer, P. J. & J. Hak. 2012. Landscape Condition in the Conterminous United States. Spatial Model Summary. NatureServe, Boulder, CO.	WGA landscape condition data created from Landfire, wells, roads, transmission lines, railroad and vertical structures. It is a measure of human impact (cropland counts as impact). Scale is 1-10,000 with higher values less impacted.	LandCond4_EOR10

The manuscript describing the methods in detail is still in review.

Cheers, Catherine

I want to make sure I understand what you are asking for - the predictor layers that were used in the Maxent model. Is this correct? If so, I can provide information on all of them but I believe for two of them (I need to look back to make sure) I was not supposed to share the data layers. For those I would be able to give you the contact information for the source. Cheers,

Catherine

Jim Pitman directed me to you as the source for the subject information, specifically the input data used to derive the output provided by Mike Houts. Is this something you can share at this time?

Thanks. -Chris

Catherine Jarnevich (USGS) in Fort Collins should everything that Houts does not. About 10 days ago she submitted a manuscript to Avian Conservation and Ecology that details the methods and results. She might be able to share that draft with you as well.
